DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I claims 1-7 and 10-13 in the reply filed on April 20, 2006 is acknowledged. The traversal is on the ground(s) that there is no burden in searching the additional claims. This is not found persuasive because the applicants have not suggested or argued why the proposed alternative method would not be a materially different method and further, the examiner has shown that subject matter of the two groups encompass two different statutory classes of invention each having a different classification. For purposes of the initial requirement of a restriction, a serious burden on the examiner may be prima facie shown if the examiner shows by appropriate explanation either separate classification, separate status in the art, or a different field of search as defined in MPEP § 808.02

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Application/Control Number: 10/795,998

Art Unit: 1775

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 and 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application publication 20050112398 A1 to Darolia et al.

Regarding claims 1, 2 and 4, Darolia discloses a substrate with a thermal barrier coating comprising a layer of aluminide or overlay material such as MCrAlX materials (page 3 paragraph [0024]). Darolia discloses a layer located above the overlay material comprising material such as Cr₂O₃ and a ceramic coating such as a zirconia based material over the aforementioned layers (page 2 paragraph [0022]). Darolia discloses the formation of a thermally protective oxide scale (Al₂O₃ layer), which forms at the surface of the MCrAlX layer as an oxidation product during processing (page 1 paragraph [0004]), as is also confirmed by applicant's disclosure on page 12 paragraphs 2-3 of the specification.

Regarding claims 3 and 10, Darolia discloses a thickness of the layer comprising Cr₂O₃ as 40-60% of 12.5-102μm, or 5-61μm, which overlaps the claimed range of thickness (page 4 paragraph [0034]). Additionally, claims 3 and 10 are product by process claims wherein the patentability of the product does not depend on its method of production. "If the product in the product by process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process unless it can be shown that the product produced by the process is in some manner measurably distinct from the product produced by another process." *See MPEP 2113*. As such, the process limitation within claims 3 and 10 do not provide patentable distinction over the prior art.

Art Unit: 1775

Regarding claims 5 and 11, Darolia discloses the overlay material may be a MCrAlX material, where M is Fe Co or Ni or alloys thereof and X is Y, Hf, Zr, Si or combinations

thereof, providing a mass percent of Al of about 12% (page 3 paragraph [0024]).

Regarding claims 6 and 12, Darolia discloses a thickness of the (undercoat) MCrAlX

layer as 30-60% of 12.5-102µm or 3.75-61µm, which overlaps the claimed range of thickness

(page 4 paragraph [0034]).

Regarding claims 7 and 13, Darolia discloses a (topcoat) ceramic layer of zirconia

stabilized with various metal oxides such as Y₂O₃, Ce₂O₃, Y₂O₃, CaO, Sc₂O₃, MgO, Yb₂O₃ (page

2 paragraph [0022]). Additionally, claims 7 and 13 are product by process claims wherein the

patentability of the product does not depend on its method of production. "If the product in the

product by process claim is the same as or obvious from a product of the prior art, the claim is

unpatentable even though the prior product was made by a different process unless it can be

shown that the product produced by the process is in some manner measurably distinct from the

product produced by another process." See MPEP 2113. As such, the process limitation within

claims 7 and 13 do not provide patentable distinction over the prior art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth Ivey whose telephone number is (571) 272-8432. The examiner can normally be reached on 7:00- 4:30 M-Th and 7:00-3:30 alt. Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571) 272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
